FIG. 1

FIG. 1A is a perspective view of a device 100. The device 100 includes a base 102, a top layer 104, and a middle layer 106. The top layer 104 is formed of a material having a high refractive index, and the middle layer 106 is formed of a material having a low refractive index. The base 102 is formed of a material having a high refractive index. The device 100 is configured to reflect light incident on the top layer 104. The device 100 includes a plurality of ridges 108 and a plurality of grooves 110. The ridges 108 are formed in the top layer 104, and the grooves 110 are formed in the middle layer 106. The ridges 108 and the grooves 110 are arranged in a periodic array. The device 100 is configured to reflect light incident on the top layer 104. The device 100 includes a plurality of ridges 108 and a plurality of grooves 110. The ridges 108 are formed in the top layer 104, and the grooves 110 are formed in the middle layer 106. The ridges 108 and the grooves 110 are arranged in a periodic array. The device 100 is configured to reflect light incident on the top layer 104.

FIG. 1A

FIG. 1B is a perspective view of the device 100 in a closed position. The device 100 includes a housing 102 and a lid 104. The housing 102 has a front face 106 and a back face 108. The lid 104 has a front face 110 and a back face 112. The front face 106 of the housing 102 and the front face 110 of the lid 104 are joined together by a hinge 114. The hinge 114 is located at the top of the device 100. The back face 108 of the housing 102 and the back face 112 of the lid 104 are separated by a gap 116. The gap 116 is located at the bottom of the device 100. The device 100 is shown in a closed position, with the lid 104 covering the front face 106 of the housing 102.
